IRRICAD PRO 10.5

IRRIGATION DESIGN SOFTWARE

## IRRICAD is the smart choice in Irrigation design software

New improvements are detailed below:

Improved Autocad Handling

Irricad can now import AutoCAD files up to and including 2009 format. It has improved handling of layouts and Xrefs making it quicker and easier to import those files with layouts or paper spaces.

Improved Image Importing

Images can be now be individually rotated, hidden or embedded in the design. The image border can also be hidden, which is great for tiling or overlapping images. Images can now be saved in your plot templates and symbols!
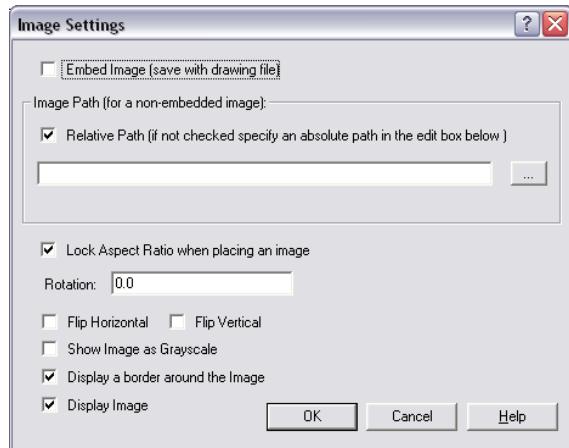

Improved Rotate Tool

Courtesy of the Visual CADD engine upgrade this tool is now much improved. It is much easier to use as the tool now shows a "ghosted" image of the items you are rotating.
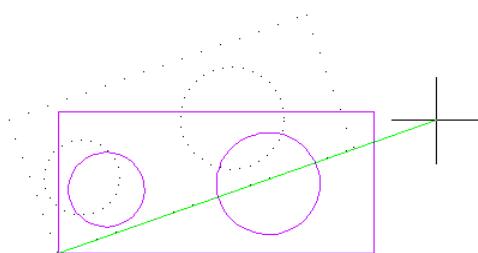

Connect Outlets Tool

With the success of the *Connect Valves* tool, and as a result of user requests, we have added a *Connect Outlets* tool. This tool will automatically connect an outlet to the nearest mainline or zone pipe as applicable.

Floating Layer Manager with NEW Layer Groups and Views

The new floating layer manager allows easy access to the layers to adjust visibility, determine which layers contain items and specify if a layer is printable. Layer Groups are used to save combinations of layer visibility that can then be retrieved in a single action. Views operate in a similar way and save a zoom state for later easy retrieval.
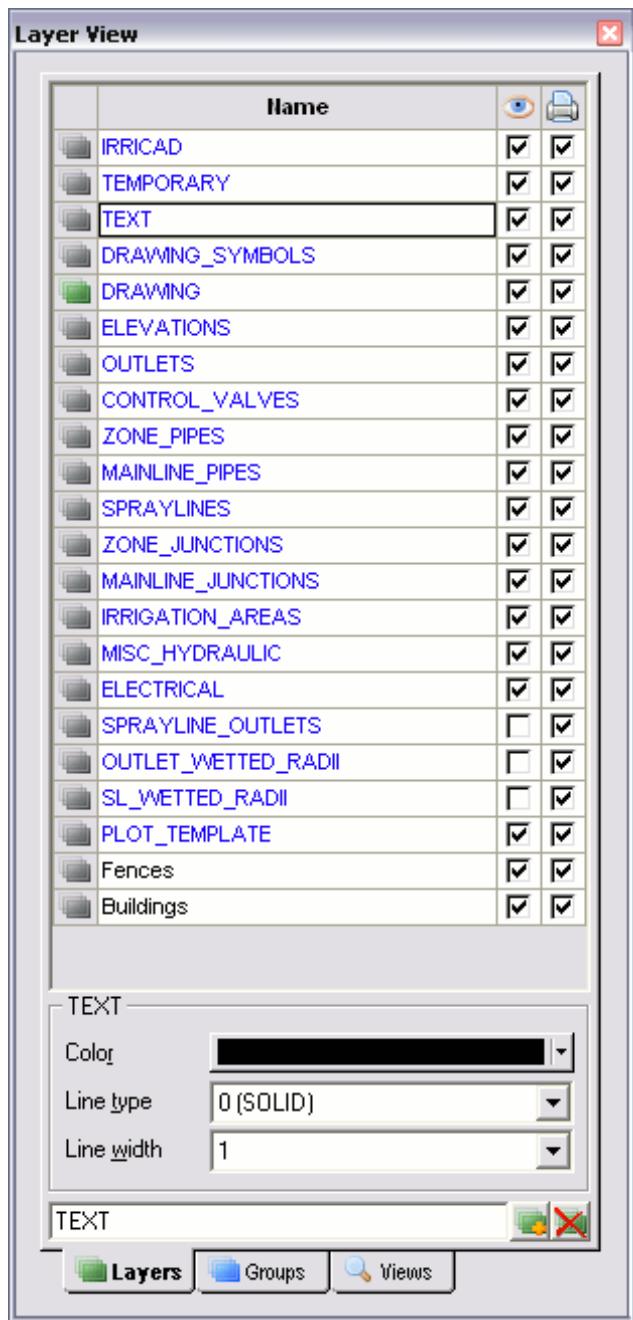

Hydraulic Gradeline Data Export

It is now a straight-forward process to export the hydraulic gradeline data to Excel. A new button on the dialog allows the data to be exported in XLS, CSV or TSV format.

Watermarking

A watermark can now be added to the printed output making it easy to superimpose 'draft only' or 'confidential' or 'copyright' etc. on the printed plan.

Database Item Display

Dialogs for database items such as pipes, outlets, valves, etc. now indicate if a design item cannot be located in the database or it can be found but is not enabled.
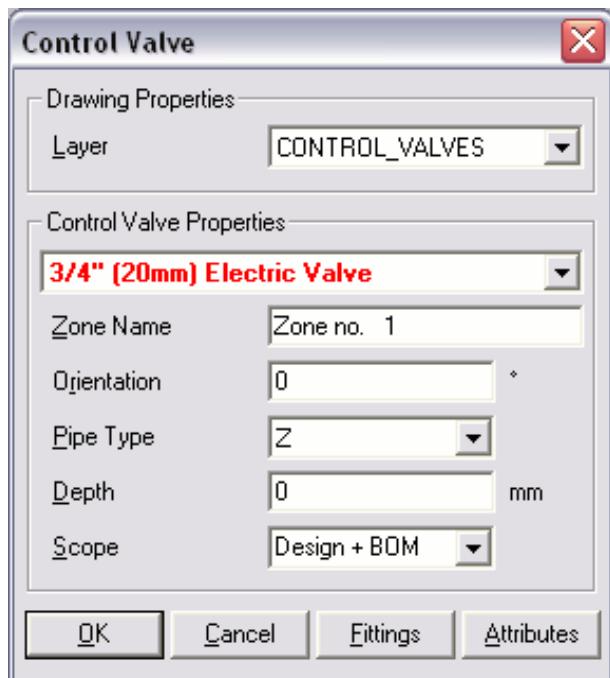

Clear Management Option

In the *Design* menu a *Clear Management* option has been added to clear the current management and decrease turn-around time for new management scenarios.

Hatch Preview Added

A preview has been added to the Hatch dialog. Also included is an *Auto Scale* option which automatically provides an appropriate scale for the current zoom state. These changes add considerably to the usability of the *Hatch* tool.
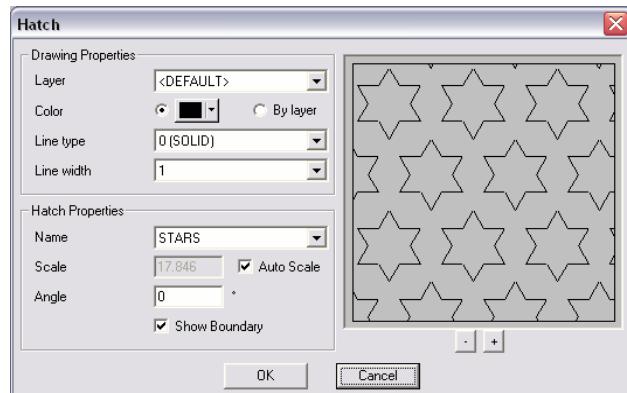

Symbol Preview Added

A time-saving symbol preview has been added to aid symbol selection and sizing. Symbols can now also be inserted at a predefined angle.
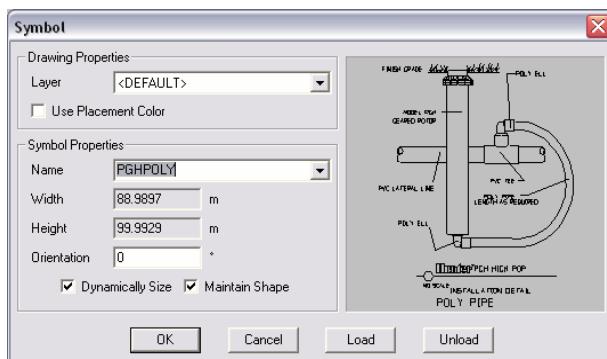

More Information

For more information on changes and new features in Pro Version 10.5, please visit Recent Developments on our website.

Receive IRRICAD Pro v11 Free!

As part of our annual upgrade plan when you purchase IRRICAD Pro v10.5 you will also receive Pro v11, due in the 1st quarter of 2011, free of charge. This will also entitle you to Priority Support until v11.5 is released (3rd quarter 2011).

Receive free online training to get the most out of IRRICAD when you upgrade!

As part of our annual upgrade plan when you purchase IRRICAD Pro v10.5 you will be able to schedule 2 hours of one-to-one online training (conditions apply).

Keep an Eye on the Website for what will be included in IRRICAD Pro v11!!
