

## FastQuote Version 5 IS HERE

### FastQuote Version 5 brings you a range of new benefits:

- Increased Compatibility with AutoCAD
- Object Linking and Embedding (OLE) Functionality
- Onscreen Minimum and Maximum Pressure Labels
- Improved Image Importing
- Editable Fill and Hatch
- New Toolbars
- New Modification Tools

### Receive free support and patch releases for 12 months!

When you purchase FastQuote v5 you will receive free priority support and patch releases for 12 months.

#### AutoCad Compatibility

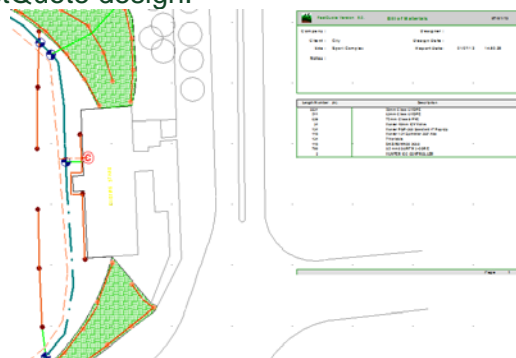

Increased AutoCAD compatibility up to 2012. Symbol color export compatibility has also been improved producing dwg and dxf files which will properly display the database symbol colors.

#### Enhanced Communication Tools

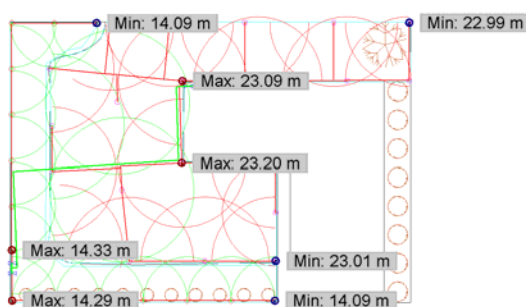

Enhanced tools for communicating design information to both customers and designers:-

##### Insert OLE

It is now possible to embed documents, spreadsheets and other objects in your FastQuote design.

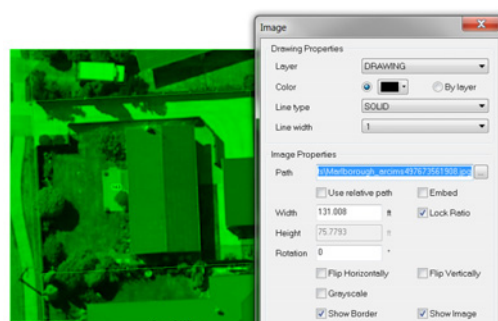

##### On-screen Pressure Labels

#### Improved Image Handling

Images can be individually rotated, hidden or embedded in the design. The image border can also be hidden, which is great for tiling or overlapping images. Images can now be saved in your plot templates and symbols!

#### New Database Editor

In response to requests for improvements we have made significant changes introducing standard Windows functions for navigation and editing, and including 32 character warehouse codes. Multi-coloured database symbols can now be used.

#### Pipe Reduction Symbols

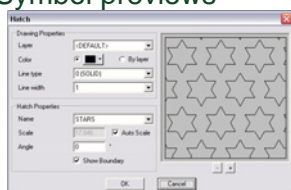

Automatically place pipe reduction symbols on the plan to clearly show installers the location, and direction, of pipe size changes. Faster and more accurate installations will result.

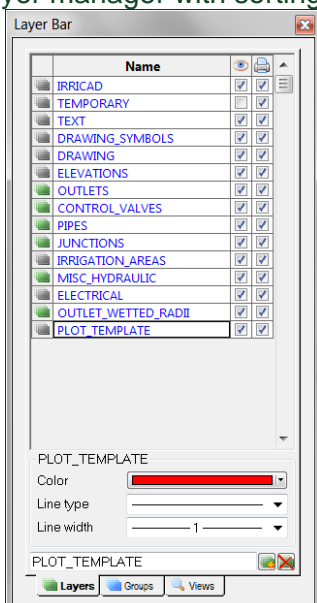

## New Modification Tools

**Significant improvements in the ease and speed of use through the addition of flexible and intuitive data entry and navigation tools:-**

- New Toolbars / New Look
- Improved Rotate tool
- Mirror and Offset Copy tools
- Trim and Extend tools
- Hatch and Fill editing
- Hatch and Symbol previews

- Quick access via the Selection panel and Snap panel on the Status bar
- Quick access to information via the Info panel
- Turn layers off and on via the right-click menu
- Floating layer manager with sorting ability.

## Connect Outlets Tool

This new tool will automatically connect outlets to the nearest pipe with the click of the mouse.

## And Many More...

- Convert drawing items to hydraulic items with ease
- Importation of GPS/GIS/CSV data
- Selection aid to help select a particular item when a number of items are in close proximity
- New Labels and a dropdown combo box
- Draw Order for images.
